

Code Example

Example:

```
1 dict_name = {} #Creates an empty dictionary
2 person = { "name": "John", "age": 30, "city": "New York"}
```

Syntax:

```
1 Value = dict_name["key_name"]
```

Example:

```
1 name = person["name"]
2 age = person["age"]
```

Syntax:

```
1 dict_name[key] = value
```

Example:

```
1 person["Country"] = "USA" # A new entry will be created.
2 person["city"] = "Chicago" # Update the existing value for the same key
```

Syntax:

```
1 del dict name[key]
```
